SUMMARY

Software engineer with 4+ years of professional experience building high-performance, cross-platform applications in Unity, Unreal Engine, and C#. Currently building a real-time conversational AI concierge (Unreal Engine and MetaHuman) while developing LLM applications on the Anthropic Claude API, including an autonomous lead-generation agent. Combines a strong engineering foundation in system architecture, performance optimization, and API integration with hands-on AI and LLM application development.

TECHNICAL SKILLS

AI & LLM Engineering: Anthropic Claude API, Prompt Engineering, Tool / Function Calling, Structured JSON Output, Context Management, Agentic Workflows, Local Inference (Ollama); RAG and Multi-Agent Systems (in progress)
Programming Languages: C#, C++, Python, Solidity
Web & Data: REST APIs, BeautifulSoup, Gradio, SQLite, WebGL
Game & Real-Time 3D: Unity3D (Expert), Unreal Engine, MetaHuman, Convai, AR/VR (Vuforia, AR Foundation), Netcode for GameObjects
Tools & Platforms: Git, Jupyter, Android SDK, Meta Quest, CI/CD

PROJECTS

AI Lead-Generation Agent — Personal Project
2025 – Present | Python, Claude API, Ollama

- Building an autonomous AI agent that automates lead generation, scraping prospect websites and qualifying leads for a digital-marketing and web-development use case.
- Designed a pluggable model backend that swaps between Anthropic Claude (Haiku) and a local Ollama model through a single unified interface.
- Built a scraper (BeautifulSoup and requests) with empty-content detection for JavaScript-rendered pages, plus a tiered review pipeline that filters low-value pages before invoking the LLM to reduce wasted API calls; Gradio chat interface with SQLite-backed tool calling.

PROFESSIONAL EXPERIENCE

Game & Graphics Developer — Evolution Co
Feb 2026 – Present | Mumbai, India

- Developing an AI concierge as a standalone Windows application in Unreal Engine, deployed on Holobox holographic displays to assist airport travelers.
- Building photorealistic MetaHuman characters with real-time lip-sync and facial animation via the Convai plugin, delivering a multimodal (voice and visual) conversational experience.
- Integrated the Unreal front end with an Azure-hosted backend via REST APIs to serve conversational responses: flight details, airport navigation, and check-in guidance.

Senior Game Developer — Coincade Studios
Jan 2023 – Jan 2026 | Mumbai, India

- Architected a 2D Web3-integrated racing game with smart-contract transactions and real-time NFT rewards, driving a 30% increase in user engagement via dynamic leaderboard mechanics.
- Deployed to Android and WebGL, improving performance by 20% through profiling and asset optimization.
- Integrated crypto payment gateways and Web3 SDKs enabling blockchain-based asset ownership.

Software Engineer (Unity) — Augurs Technologies Pvt. Ltd.
Jun 2022 – Jan 2023 | Lucknow, India

- Led an AR insurance prototype (Vuforia) with optimized image recognition and animated policy visualization, achieving 30% better user interaction.
- Engineered a real-time image-scanning system that cut detection lag by 40% with smoother target tracking.
- Optimized the AR rendering pipeline for stable 60 FPS on mid-range mobile devices.

Game Developer — BYJU'S Future School
Feb 2021 – Jun 2022 | Mumbai, India

- Designed and shipped 5+ Unity games with educational storytelling and physics challenges for 1000+ students.
- Mentored 10+ student teams, improving project completion rates by 40% via structured curriculum and agile workflows.

EDUCATION & PROFESSIONAL DEVELOPMENT

LLM Engineering — Ed Donner's LLM Engineering course (in progress), 2025 – Present
API fundamentals through RAG, fine-tuning, and multi-agent systems; self-directed Data Structures and Algorithms practice.
Post Graduate Program in Game Development — G.A.M.E Institute, 2018 – 2021
B.E. in Information Technology — Mumbai University, 2015 – 2018
